

MANAGEMENT DISCUSSION AND ANALYSIS

FOR THE YEAR ENDED JANUARY 31, 2022

INTRODUCTION

This Management Discussion and Analysis (“MD&A”) provides a detailed analysis of the business of Nexus Gold Corp. (“Nexus” or the “Company”) and compares its financial results for the year ended January 31, 2022 to the comparative period of the previous year. This MD&A should be read in conjunction with the Company's consolidated financial statements for the year ended January 31, 2022. The Company's reporting currency is the Canadian dollar and all amounts in this MD&A are expressed in Canadian dollars.

The Company's financial results are being reported in accordance with International Financial Reporting Standards (“IFRS”) as issued by the IASB. Further details are included in Note 2 of the audited consolidated financial statements for the year ended January 31, 2022. This MD&A is dated May 30, 2022.

Nexus Gold Corp. (the “Company”) was incorporated under the Business Corporations Act of British Columbia on May 7, 2009, is a public company listed on the TSX Venture Exchange (the “TSXV”) and trades under the symbol NXS.

During the year ended January 31, 2017, the Company's common shares have commenced trading in the United States under the ticker symbol “NXXGF”. The listing coincides with the Company's ongoing efforts to support its existing US shareholder base, and to facilitate trading in the OTC markets. The company is DTC eligible to support electronic trading. The Company's common shares will continue to trade on the TSX Venture Exchange under the ticker symbol “NXS”.

Management is responsible for the preparation and integrity of the consolidated financial statements, including the maintenance of appropriate information systems, procedures and internal controls to ensure that information used internally or disclosed externally, including the consolidated financial statements and MD&A, is complete and reliable.

This MD&A contains certain statements that may constitute “forward-looking statements”. Forward-looking statements include but are not limited to, statements regarding future anticipated exploration programs and the timing thereof, and business and financing plans. Although the Company believes that such statements are reasonable, it can give no assurance that such expectations will prove to be correct. Forward-looking statements are typically identified by words such as: believe, expect, anticipate, intend, estimate, postulate and similar expressions, or which by their nature refer to future events.

**NEXUS GOLD CORP.
MANAGEMENT DISCUSSION AND ANALYSIS
FOR THE YEAR ENDED JANUARY 31, 2022**

The Company cautions investors that any forward-looking statements by the Company are not guarantees of future performance, and that actual results may differ materially from those in forward looking statements as a result of various factors, including, but not limited to, the Company's ability to identify one or more economic deposits on its property, to produce minerals from its property successfully or profitably, to continue its projected growth, to raise the necessary capital or to be fully able to implement its business strategies.

Additional information relating to the Company can be located on the SEDAR website at www.sedar.com.

OVERALL PERFORMANCE AND HIGHLIGHTS

PRIVATE PLACEMENTS

On December 1, 2021, the company has completed a non-brokered private placement for gross proceeds of \$530,000. In connection with closing of the offering, the company has issued 5,000,000 flow-through units and 5,600,000 non-flow-through units. Each unit (flow-through and non-flow-through) was issued at a price of five cents and consists of one common share of the Company and one common share purchase warrant exercisable at price of \$0.07 per share until December 1, 2024.

On June 28, 2021 the Company completed the offering of 16,109,450 units. The units were offered by way of non-brokered private placement, at a price of \$0.05 per Unit, for gross proceeds of \$805,473. Each unit consists of one common share and one common share purchase warrant exercisable to acquire an additional common share at a price of \$0.07 until June 28, 2024. The gross proceeds from the offering will be used for further project development work and for general working capital purposes. In connection with completion of the offering, the Company paid finders' fees of \$13,500 and issued 270,000 Warrants to certain arm's-length parties that introduced subscribers to the offering.

On May 31, 2021 the Company completed the offering of 18,500,000 units. The Units were offered by way of non-brokered private placement, at a price of \$0.05 per unit, for gross proceeds of \$925,000. Each unit is comprised of one common share, and one common share purchase warrant exercisable to acquire an additional common share at a price of \$0.07 until May 31, 2024. The gross proceeds from the offering will be used for further project development work and for general working capital purposes. In connection with completion of the offering, the Company paid finders' fees of \$12,000 and issued 240,000 warrants to certain arms-length parties who introduced subscribers to the offering.

On March 25, 2021 the Company closed a non-brokered private placement through the issuance of 6,592,640 units at a price of \$0.05 per unit for gross proceeds of \$329,632. Each unit consists of one common share of the Company and one common share purchase warrant entitling the holder to purchase one additional share at a price of \$0.07 for a period of three years. No finders' fees or commissions were paid in connection with completion of the Offering.

EXPLORATION ACTIVITIES

BURKINA FASO PROPERTIES

Burkina Faso is a landlocked nation located in West Africa between Ghana and Mali, the second and third largest gold producing countries on the continent. It is underlain by rocks of the same age and history as its neighbors but it is still relatively under-explored compared to its neighbors. It covers an area of roughly 274,000 square kilometers and has an estimated population of more than 16 million people. The country is pro-mining and has a favorable foreign investment stance.

The country is the fastest growing gold producer in Africa. It is ranked 2nd in the continent and 37th worldwide in current Best Practices Mineral Potential Index in the “Survey of Mining Companies 2019” conducted by The Fraser Institute of Canada.

<https://www.fraserinstitute.org/sites/default/files/annual-survey-of-mining-companies-2019.pdf>.

Since 2019, there are seven gold mines in production. Other resources currently being mined include manganese, bauxite, copper, nickel, lead, zinc, and limestone/marble.

The country has excellent geological potential. The Greenstone Belts that host all of the major deposits in Ghana and Cote d'Ivoire continue northward into Burkina Faso. Some of the world's most productive mines are located in West African greenstone belts. These belts cover approximately 3,000,000 km², making the area's exploration potential enormous. Burkina Faso currently accounts for 21% of West Africa's greenstone belt exposure. Burkina Faso has undergone less than 15 years of modern mineral exploration, remaining under explored in comparison to neighboring Ghana and Mali; both of which host world class gold mines in the same belts of Birimian rocks.

NEXUS GOLD CORP.
MANAGEMENT DISCUSSION AND ANALYSIS
FOR THE YEAR ENDED JANUARY 31, 2022

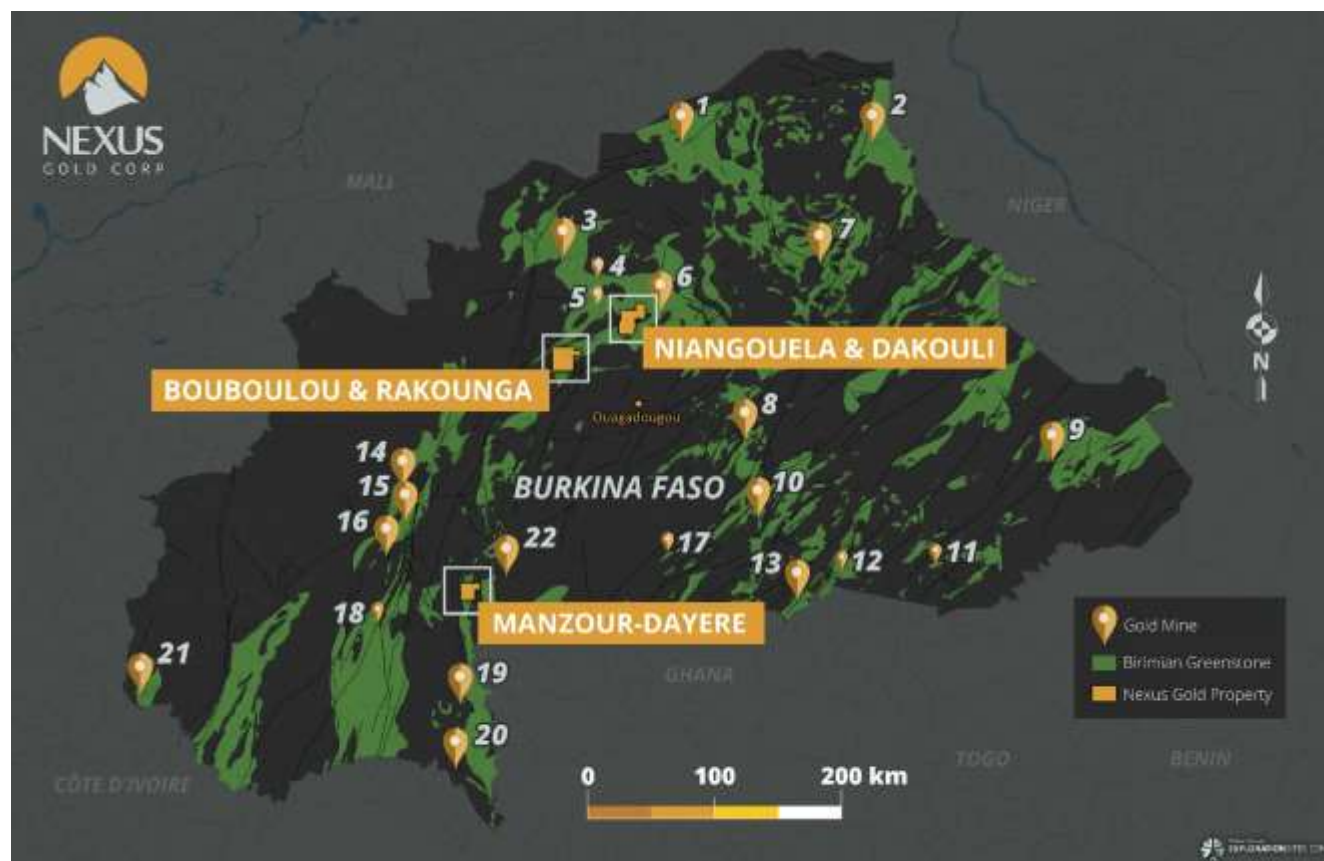

Figure 1: Nexus Gold projects in Burkina Faso, in relation to well known deposits and producing mines

Rakounga Gold Property, Burkina Faso, West Africa

On July 11, 2017, the Company signed a definitive agreement with Belemyida SA (the "Optionor"), pursuant to which the Company acquired the right to earn up to 100% interest in the Rakounga Gold Property located in Burkina Faso, West Africa. The agreement was amended in August 2019.

The Company has an option to acquire a 90% interest in the property, in consideration for cash payments and the issuance of common shares as follows:

- i) pay US\$15,000 (paid) and issue 2,500 shares (issued at a value of \$4,625) upon signing of a definitive agreement;
- ii) pay US\$15,000 (paid) and issue 50,000 shares on or before August 31, 2018 (issued at a value of \$15,250);
- iii) pay US \$25,000 (paid) and issue 250,000 shares on or before December 13, 2019, as amended (issued at a value of \$25,000);
- iv) pay US\$70,000 (paid) and issue 250,000 shares (issued) on or before April 30, 2020, as amended; and
- v) issue 250,000 shares on or before August 30, 2020 (issued);
- vi) issue 250,000 shares on or before August 30, 2021 (issued), as amended;

NEXUS GOLD CORP.
MANAGEMENT DISCUSSION AND ANALYSIS
FOR THE YEAR ENDED JANUARY 31, 2022

- vii) pay US\$125,000 on or before November 30, 2021, as amended and
- viii) pay US\$150,000 on or before November 30, 2024, as amended.

Following the acquisition of a 90% interest in the property, the Company has the option to acquire the remaining 10% interest in the property through a cash payment of US\$1,000,000 with a 1% net smelter return royalty remaining with the Optionor.

The 250-square kilometer Rakounga Gold property is contiguous to the Company's Bouboulou gold concession. The Property borders Bouboulou on the west and south sides and hosts the Bouboulou 1 gold showing, which is the southern extension of the Bouboulou 2 trend. Bouboulou 1 is an active orpaillage with shaft workings that extend down approximately 80 meters.

On December 2, 2019 the Company entered into an agreement to grant 100% of the interest in Rakounga property to Kruger Gold Corp (“Project Partner”). In March 2020 the Company reached an agreement with Project Partner to amend the terms of a property option agreement entered into on December 2, 2019. Under the amended terms, Project Partner can acquire a 90% in consideration for completing a financing or going public transaction before December 13, 2020, and making the following payments:

- i) paying \$30,000 on December 2, 2019 (received);
- ii) paying \$70,000 on or before April 30, 2020 (received);
- iii) \$150,000 on or before December 2, 2021;
- iv) \$250,000 on or before December 2, 2022;
- v) \$500,000 on or before December 2, 2023

incurring the following exploration expenditures:

- i) \$100,000 on or before December 2, 2021;
- ii) an additional \$150,000 on or before December 2, 2022;
- iii) an additional \$500,000 on or before December 2, 2023 and
- iv) an additional \$500,000 on or before December 2, 2024.

Following completion of these payments and expenditures, Project Partner can acquire the 10% interest in the project by completing a one-time cash payment of \$1,000,000. Project Partner continues to oversee operations at the project and will assume responsibility for all existing royalty obligations in the event the right to acquire the project is exercised.

Management has considered whether the costs capitalized for Rakounga property are recoverable based on the review of future option payments to be made and option payments to be received from the Optionee. Based on the results of this assessment, it was determined that the capitalized costs are not recoverable and as such the related capitalized exploration and evaluation costs have been written-down to \$1, resulting in a write-off of exploration and evaluation assets of \$951,856.

In September 2020 Kruger Gold completed a 55-line kilometer soil sampling program on the 200sq km Rakounga gold project in Burkina Faso. The geochemical survey was established to fill open space on the property between the property boundary on the north and a previous soil

**NEXUS GOLD CORP.
MANAGEMENT DISCUSSION AND ANALYSIS
FOR THE YEAR ENDED JANUARY 31, 2022**

sampling grid located to the southwest. A total of 778 samples were collected from stations spaced at 50 meters along lines that were 200 meters apart. Samples were collected at a depth of 50 centimeters below surface. Samples were collected placed in 3 mil poly plastic bags with an identifying tag and shipped to Actlabs Ouagadougou for gold analysis.

There were minimal exploration activities conducted on the Rakounga property during the year ended January 31, 2022.

Dakouli II gold property Burkina Faso West Africa

The Dakouli 2 exploration permit is a 98-sq km (9,800 hectares) gold exploration property located approximately 100 kilometers due north of the capital city Ouagadougou. The Dakouli II Property is 100% owned by Nexus Gold Corp. Burkina SARL.

The maiden Dakouli drill program, started in November 2020 consists of approximately 3000 meters of Reverse Circulation (“RC”) drilling to test depth extensions of geochemical gold anomalies identified through termite mound sampling, soil gold geochemistry which identified three trends intersecting the property (see Company news release dated June 11, 2019) and finally rock geochemistry which has returned higher grade gold results from selective *grab samples extracted from Artisanal mining areas (“Orpailages”) (see Company news releases dated January 8 and 15, 2019, June 23, 2020, and September 10, 2020) . The Company engaged Forage Technic Eau (“FTE”) Drilling to conduct a minimum 3000 meters of Reverse Circulation (“RC”) Drilling program.

The Dakouli 2 permit is located on the Goren greenstone belt, proximal to Nordgold’s Bissa Mine, and is bisected by the gold bearing Sabce Shear zone.

In August 2020 while conducting a field reconnaissance program to prioritize drill target locations Company geologists collected 10 rock samples from areas being exploited by artisanal miners (“orpailleurs”). A highlight result of 98.9 grams-per-tonne (“g/t”) gold (“Au”) was returned from sample DK-0036. This sample was a select grab sample of material being mined by the orpailleurs from a depth of 40 meters below surface. A nearby sample of material which had undergone preliminary gold extraction by panning and a waiting a second round of panning returned results of 49.7 g/t Au. Select samples from proximal orpailleurs shafts from varying depths also returned elevated gold values of 12.8 g/t Au, 11.1 g/t Au, and 10.9 g/t Au, respectively.

*Grab samples are selective by nature and may not represent the true grade or style of mineralization across the property

During December 2020, the Company completed 2911 meters of Reverse circulation drilling in 22 holes on the Dakouli II property. The drill program tested five target areas on the property. Two of these target areas intersected zones containing elevated gold values.

The first area where Drill holes DKL-20-RC-001,2 were drilled is located on the western edge of the property and were testing an area which had returned anomalous gold values in Rocks sampling. Hole DKL-20-RC-002 intersected 16 meters of 0.64 gram per tonne gold.

NEXUS GOLD CORP.
MANAGEMENT DISCUSSION AND ANALYSIS
FOR THE YEAR ENDED JANUARY 31, 2022

The second area is located in the North East corner of the property had a total of twelve holes drilled (DKL-20-RC-006-018) to test a board area of artisanal workings. The highlights of the drilling in this area were returned from drill hole DKL-20 -RC-007 which returned 20 meters of 4.83 grams per tonne gold, drill hole DKL-20-RC-010 which returned 8 meters of 1.89 grams per tonne gold, hole DKL-20-RC-009 which returned 10 meters of 1.61 gram per tonne gold, hole DKL-20-RC-018 which returned 6 meters of 1.35 gram per tonne gold and hole DKL-20-RC-016 which returned 8 meters of 1.13 gram per tonne gold. The drill intercepts are shown in the table 1 below.

This drilling in the Northeast has now traced gold mineralization for 450 meters along strike and has intersected gold mineralization to depths of 100 meters. This mineralization remains open along strike and to depth.

During the quarter the company mobilized a diamond drill to the Dakouli II property to begin a 2000-meter diamond drill program. This program was designed to test and expand on the gold mineralization encountered from the Reverse circulation drill program. The drill program was completed on June 14 and consisted of 11 holes totaling 2500 metres. Nine of the eleven holes drilled tested for gold mineralization in the Northeast corner of the property while the final two holes were drilled to test mineralization near the western boundary of the permit. Drilling in the Northeast has outlined gold mineralization extending for some 550 meters along strike and to vertical depths of 103 metres. The gold mineralization occurs in quartz veins and veinlets hosted in meta-volcanic rocks. Significant gold values were returned from drill hole DKL-21-DD-002 which returned 28 metres of 1.90 g/t gold which includes 4 metres of 10.87 g/t gold and DKL-21-DD-001 which intersected 32 metres of 0.75 g/t gold which includes 1 metre of 6.88 g/t gold, DKL-20-DD-003 which intersected 22 metres of 0.47 g/tonne gold DKL-20-dd-008 which intersected 12.7 g/t gold over 1 meter.

Significant Results from the first nine holes are tabled below:

**NEXUS GOLD CORP.
MANAGEMENT DISCUSSION AND ANALYSIS
FOR THE YEAR ENDED JANUARY 31, 2022**

Manzour-Dayere gold property Burkina Faso West Africa

On February 4, 2020 the Company's wholly owned subsidiary, Nexus Gold Corp. Burkina SARL, has acquired through application a 100% percent interest in the 190.53 km² (19,053-hectare) Manzour-Dayere gold exploration permit located on the Boromo Greenstone belt, 325 km south west of the capital city of Ouagadougou, Burkina Faso, West Africa.

Historical exploration conducted on the property between 2011 and 2014 identified an area of large artisanal workings ("orpaillage") located on the property. Sampling conducted at that time throughout the artisanal workings returned reported high-grade values of 132 grams-per-tonne ("g/t") gold ("Au"), 85.40 g/t Au, 61.20 g/t Au, and 27.9 g/t Au, from select grab samples of quartz veining at the orpaillage, while select grab samples of the sedimentary host rock have returned values of 103 g/t Au and 21.40 g/t Au, respectively. The workings on the orpaillage are extensive and extend to depths of 60 to 80 meters below surface.

In March 2020 the company conducted a prospecting program on the property it collected 12 rock samples while identifying areas of artisanal mining. Highlights of this initial round of sampling includes 9.60 grams-per-tonne ("g/t") gold ("Au"), 7.07 g/t Au, 5.73 g/t Au, 3.84 g/t Au and 2.84 g/t Au. These new samples add to the historical data collected to date and will assist Company geologists in determining potential exploration targets for future drilling.

During the year ended January 31, 2021 the company geologists spent 5 days prospecting the Manzour-Dayere permit. The program was designed to traverse the roads on the property to build a suitable base map for further prospecting and more detailed geochemical sampling.

During the Quarter April 30, 2021 a five-day reconnaissance program consisting of mapping the road accessibility of the property was completed by Nexus geologists. The program consists of tracking on a handheld GPS the various roads and trails which bisect the property while searching for artisanal workings and rock outcrops.

In August 2021, Nexus Gold Corp. has received additional assay results from the diamond drill program conducted at its 100-per-cent-owned, 9,800-hectare, Dakouli 2 gold project, located in Burkina Faso, West Africa.

Drill hole DKL-21-DD-008 returned 12 metres of 1.18 grams per tonne (g/t) gold (Au), within a broader intercept of 30 metres of 0.52 g/t Au, which also includes 0.86 g/t Au over 17 metres, 2.19 g/t Au over six metres, 6.51 g/t Au over two metres and 12.7 g/t Au over one metre. Drill hole DKL-21-DD-009 returned 18 metres of 0.37 g/t Au, including 2.22 g/t Au over two metres.

A total of 2,500 metres of exploratory drilling was completed over 11 holes. This drill program was designed to confirm and further test zones of mineralization discovered during the company's reverse circulation (RC) drill program conducted at the end of 2020.

NEXUS GOLD CORP.
MANAGEMENT DISCUSSION AND ANALYSIS
FOR THE YEAR ENDED JANUARY 31, 2022

On December 2021, Nexus Gold Corp. has received confirmation from the government of Burkina Faso's Ministre de L'Energie des Mines et Les Carriers that its application for expanding the Dakouli 2 permit has been approved.

The expansion of the Dakouli 2 project has resulted in the exploration permit being expanded by 1.39 square kilometres. The expansion extends the permit coverage westward from its original configuration and now encompasses areas first identified in 2013, where previous explorers collected rock grab samples returning results of 1.75 grams per tonne gold, 2.14 grams per tonne gold and 2.32 grams per tonne gold. These rock samples are described as white quartz veins hosted in red granite.

Subsequent to the rock sampling, a program of air-core (AC) and reverse circulation (RC) drilling was used to investigate the area.

The drill program consisted of four RC holes for 430 metres (PNRC001 to PNRC003 and PNRC009) and 12 AC holes for 250 metres (PNAC001 to PNAC012).

The best reported results from this drilling are 12 metres of 1.01 grams per tonne from hole PNRC001 and 36 metres of 0.51 gram per tonne in hole PNRC003. Reported drilling described that the main gold mineralization is associated with a fine-grained syenite dike with sulphide and quartz veining up to 14 metres thick. It is interpreted that this dike is striking to the northeast and dipping to the south.

CANADIAN PROPERTIES

New Pilot Property Gold Bridge, BC

In January 2019, the Company issued 3,500,000 shares valued at \$385,000 to a company with a director in common to acquire a 100% interest in New Pilot Project located in British Columbia, Canada. The acquisition agreement was finalized in February 2019. The Company recorded \$385,000 as acquisition costs in fiscal 2020.

The Company conducted a rock sampling and geological mapping program on the New Pilot Property in late July 2019, during the program a total of 36 rock samples were collected over the program. A zone of copper-gold mineralization was confirmed, and selective samples returned gold values of 15.3 grams-per-tonne ("g/t") gold ("Au"), 33.4 g/t, silver ("Ag"), and 2.5% copper ("Cu"), in addition to 4.27 g/t Au, 5.5 g/t Ag, and 0.27% Cu, and 3.91 g/t Au, 3.72 g/t Ag, and 0.51% Cu.

The mineralization identified consists of a shear occurring in a granodiorite proximal to the contact between the coastal intrusive rocks and Bridge River sedimentary rocks. The average of the 15 samples collected over this 13 by 16-meter zone is 2.37 g/t Au, 5.2 g/t Ag, and 0.55% Cu.

In March of 2021 the company engaged Precision GeoSurveys to conduct a 301-line kilometer Air borne magnetic and Radiometric survey over the New Pilot Property. The company has received the final report and is reviewing the results to determine the next phase of exploration for the New Pilot Property.

**NEXUS GOLD CORP.
MANAGEMENT DISCUSSION AND ANALYSIS
FOR THE YEAR ENDED JANUARY 31, 2022**

There were minimal exploration activities conducted on the New Pilot property during the year ended January 31, 2022.

McKenzie Island Property Red Lake, Ontario

On February 12, 2019 the Company entered into a mineral property acquisition agreement to purchase 100% interest in the McKenzie Island Claims in consideration for cash payment of \$150,000 (paid) and the issuance of 4,000,000 (issued) shares within five days of the acceptance of the agreement. 300,000 shares valued at \$39,000 were issued to finders of this property.

In May of 2020 the company purchased two contiguous claims to its Mackenzie Island property for \$4000 cash (paid) and 400,000 shares (issued) and subject to a 1% Net smelter return.

In July of 2020 the company completed a 2000-meter diamond drill program investigating the mineral potential in the St. Paul's Bay area of the property. A total of 13 holes were completed testing various targets identified in early prospecting programs. Of the first six holes drilled (784 total meters), six returned elevated gold assays while the last three holes MK2020-004, 005, and 006, all contained zones reporting visible gold. Significant gold results were returned from hole MK 2020-006 which intersected a zone containing a blue gray quartz vein and returned values of 13.25 grams-per-tonne ("g/t") gold ("Au") over 2.75 meters from 68.75 to 71.50 meters, which includes one meter of 36.20 g/t Au.

The second phase of this drill program recovered two significant, lengthy mineralized intercepts, including 117.4 meters of .33 g/t Au (including 9.4 meters of 1.26 g/t Au), and 117.5 meters of .62 g/t Au, which included 55.5 meters of 1 g/t Au, including 16 meters of 1.42 g/t Au, and 6 meters of 2.37 g/t Au, and 9 meters of 1.14 g/t Au, among others (see Company news release dated September 3, 2020). These holes were drilled north of the other 11 holes and represent a new area of interest for further exploration.

The results from phase two drilling were successful in identifying a second style of gold mineralization at McKenzie, while the presence of these disseminated lengthier near one-gram intervals is viewed as a key development in establishing the presence of economic mineralization at the project. It is also notable that this type of mineralization more closely resembles Premier Gold Mines' nearby past-producing Hasaga Mine, located approximately five kilometers east of McKenzie, which is estimated to host and Indicated mineral resource of 1.12M ounces of gold grading .83 g/t Au*.

**HASAGA PROJECT RED LAKE MINING DISTRICT, ONTARIO, CANADA NTS MAP SHEETS 52K/13 AND 52N/04 by Vincent Jourdain (Ph.D., P.Eng.), John Langton (M.Sc., P. Geo.) & Abderrazak Ladidi (P.Geo.) dated February 24th, 2017).*

Figure 3: Phase one drill locations, McKenzie Gold Project, Red Lake, Ontario

During April of 2021 the company completed a 2100 metre diamond drill program on the McKenzie Property. A total of total of 8 holes were drilled. The program was designed to expand on the positive results obtained in 2020 in the Saint Paul's Bay area. During the drilling campaign several holes reported run containing visible gold associated with blues grey quartz veins. At the time of the preparation of the MD&A the company had received assay results from the first five holes drilled. Significant results were returned from holes MK-21-DD-019 which returned 136.5 metres of 1.25 g/t gold (includes 1 metres of 59 g/t gold) and hole MK-21-DD-018 which returned 198.45 metres of 0.99 g/t gold (which includes 23.1 g/t over 1 metre, 12.14 g/t gold over 1 metre and 94.20 g/t gold over 1 metre). Results from the drilling are shown in Table 4 below:

On October 5, 2021, Nexus Gold Corp. has begun a prospecting and targeting program at the McKenzie gold project, located in Red Lake, Ont., Canada.

The prospecting program is primarily focused on the northern shores of Perch Lake in the St. Paul's Bay area of the 1,400-hectare project and is designed to explore and confirm the extension of mineralization previously identified by the company in its spring 2021 diamond drill program.

In October 2021, Nexus Gold Corp. prepared to continue phase 2 diamond drilling to expand known mineralization at its 100-per-cent-owned McKenzie gold project, located in Red Lake, Ont.

The company finalized details on a 2,000-metre diamond drill program, scheduled to commence in early November, designed to test the northerly trending gold mineralization already established in the St. Paul's Bay region of the claim block (see the company's news releases dated May 25, 2021, and June 1, 2021).

Nexus Gold Corp. will be engaging FullForce Diamond Drilling Ltd. to complete round two of its diamond drilling program on its 100-per-cent-owned McKenzie gold project located at Red Lake, Ont. Crews are expected to mobilize to the site early next week, with drilling set to commence immediately thereafter.

FullForce will be drilling up to 2,000 metres in this program which will test areas under and north of Perch Lake, in an effort to increase the strike length of the known mineralized zones. Recent prospecting by the company has identified the presence of historic trenches on the north side of Perch Lake. The trenches comprise quartz veins containing clots and patches of semi-massive chalcopyrite, pyrite and molybdenite. The veins are hosted in granite which displays strong pervasive silica flooding.

**NEXUS GOLD CORP.
MANAGEMENT DISCUSSION AND ANALYSIS
FOR THE YEAR ENDED JANUARY 31, 2022**

Local discrete shearing in both trenches trend at approximate attitudes of 330 degrees and dip 70 degrees to 80 degrees to the east, displaying similar trends and lithologies established in the company's previous drill campaigns south of the lake.

On November 11, 2021, Nexus Gold Corp. has mobilized crews and equipment to its 100-per-cent-owned McKenzie gold project located at Red Lake, Ont., and the drilling started.

On December 1, 2021, Nexus Gold Corp. has completed its second round of phase 2 diamond drilling on its 100-per-cent-owned McKenzie project located at Red Lake, Ont.

On February 2, 2022, Nexus Gold Corp. has released initial assay results from its second round of phase 2 diamond drilling on its 100-per-cent-owned McKenzie gold project located at Red Lake, Ont.

This second round of drilling, completed in December, 2021, was designed to test gold anomalies occurring in and around historic trenches identified earlier in the fall by prospecting teams employed by the company. The program was also testing the potential strike extension of mineralization identified in the first round of phase 2 drilling in the spring of 2021. The program consisted of eight drill holes totalling 2,000 metres.

Significant mineralization was encountered in three of the first four holes from the December drill program, which also substantially expanded the strike length of the mineralized zone. Highlights from the first four holes received include:

- MK-21-024 which assayed 22 metres (m) of 2.19 grams per tonne (g/t) gold (Au), which includes one m of 21 g/t Au at 65 m depth and 1.5 m of 24.5 g/t Au at 70.5 m depth;
- MK-21-027 returned 23 m of 0.59 g/t Au, including one m of 2.76 g/t Au and one m of 6.31 g/t Au;
- MK-21-030 returned multiple mineralized intercepts, including three m of 1.41 g/t Au, six m of 1.07 g/t Au, six m of 1.17 g/t Au and two m of 2.41 g/t Au. These higher-grade results were contained within lengthier sub-one-gram intercepts, including 25 m of 0.52 g/t Au, 10 m of 0.58 g/t Au, 22 m of 0.52 g/t Au and 12 m of 0.63 g/t Au.

Seven of the eight holes drilled in December successfully intersected gold mineralization. To date, Nexus has drilled 30 holes at McKenzie, with 27 returning gold values of one g/t Au or better (visit Nexus Gold's website for a complete drill table under the McKenzie gold project tab). Data generated show a mineralized trend that develops south of Perch Lake and continues in a north/northwesterly direction.

All drill holes were collared in the Dome stock and successfully cored through granitic rock displaying zones of potassic (K) alteration with zones of silica and sericitic alteration; sulphide mineralization consisting primarily of pyrite with lesser chalcopyrite; and occasional molybdenite and sphalerite hosted in quartz carbonate stringers and veins, which was reported occurring in both alteration styles but in greater amounts in the siliceous sericitically altered granite.

**NEXUS GOLD CORP.
MANAGEMENT DISCUSSION AND ANALYSIS
FOR THE YEAR ENDED JANUARY 31, 2022**

On March 9, 2022, Nexus Gold Corp. has commenced exploration at its wholly owned 13,166-hectare Cyclone project, a gold-nickel-copper property that covers a 28-kilometre strike length of the Aquilon greenstone belt in the James Bay region of Northern Quebec.

The Company has contracted Prospectair Geosurveys Inc. of Gatineau, Quebec, to conduct a property-wide, 1,127 line-kilometers (line-spacing of 150 meters) combined magnetic (MAG) and time-domain electromagnetic (TDEM) airborne survey.

NEWFOUNDLAND EXPLORATION PROPERTIES

Gummy Bear ("GB") Copper-Gold Project, Newfoundland

In May 2019 the Company reached an agreement with Robert Stares, an arms'-length party, to acquire a series of mineral claims located in Central Newfoundland and commonly known as the Gummy Bear Copper-Gold Project. In consideration for the project, the Company is required to issue 4,000,000 common shares. The Company is also required to grant a 2.0% net smelter returns royalty on commercial production from the project, one-half of which may be purchased at any time for a cash payment of \$1,000,000.

The project is located in Central Newfoundland, 15 km south of South Brook and 40 km north of Badger on the Trans-Canada Highway. Woods roads give good access to all parts of the Project. The project consists of 7 Claims and covering an area of 2,525 hectares.

Regional Geology

The project is underlain on the eastern side by mafic volcanic of the Roberts Arm Group, a steeply dipping, attenuated and deformed sequence of dominantly submarine volcanic and volcanogenic rocks. Much of the central part of the project is underlain by the Gull Island Formation (Badger Group), comprising marine siliciclastic. A tectonized block of mélangé termed the Sops Head Complex occurs locally. Marine siliciclastic of the Pennys Brook Fm (Wild Bight Gp) occur to the north. Marine sandstones of the Crescent Lake Fm (Roberts Arm Gp) underlie parts of the NE section of the project.

Mineralization

The Company has acquired the project to investigate the gold potential based on anomalous gold occurring in outcrop which graded up to 4.2 g/t Au. In addition to the gold showing, several large boulders containing pyrrhotite, pyrite and chalcopyrite have been discovered to the south west which have returned assays ranging from 2.76 - 4.02 % Cu. Historic aeromag/ EM surveys conducted in 1989 identified six parallel conductors a few kilometers to the east of the boulder train.

Three additional showings occur in the western portion of the claim block, the Moose Brook Showing, the Tommy's Arm, and the Rocky Point Cu showing. Mineralization is described as consisting of disseminated chalcopyrite, pyrite and possibly molybdenite in the mafic to felsic flows of the Roberts Arm Group (Elias, 1957). Alteration includes graphite and several narrow bands of hematite. Pyrite

NEXUS GOLD CORP.
MANAGEMENT DISCUSSION AND ANALYSIS
FOR THE YEAR ENDED JANUARY 31, 2022

occurs with the graphite. Mineralization is interpreted as pre-to syn-tectonic. Elias (1957 estimate that 1-2% Cu is present. The Tommy's Arm Fault runs through the mineralized area and may be a structural control for the mineralization.

Field crews began mobilizing to the Gummy Bear Property on May 10, 2021 to conduct a property wide soil geochemistry program concurrent with prospecting and geological mapping the program is estimated to cost \$70,000.00 and will continue into the summer.

NEXUS GOLD CORP.
MANAGEMENT DISCUSSION AND ANALYSIS
FOR THE YEAR ENDED JANUARY 31, 2022

Figure 1: GB Project (Gummy Bear) Sample Locations

During the quarter the company completed a geochemical survey on the Gummy Bear Property. The surveys cover 39.7-line kilometers over two grid areas, on the eastern edge of the property with the other on the western edge. Lines were spaced 50 to 100 meters apart with sample stations every 50 meters. A total of 734 soil samples and 6 rock samples were collected during the survey. The company

**NEXUS GOLD CORP.
MANAGEMENT DISCUSSION AND ANALYSIS
FOR THE YEAR ENDED JANUARY 31, 2022**

is awaiting geochemical results from the laboratory and will release the results once they have received reviewed and verified.

Black Ridge Gold Project and the Bauline Epithermal Gold Project, in Newfoundland

In June 2019 the Company reached a further agreement with Robert Stares, an arms'-length party, to acquire two additional exploration-stage gold projects, the Black Ridge Gold Project and the Bauline Epithermal Gold Project, in Newfoundland, Canada.

In consideration for the acquisition of the two projects, the Company is required to issue 5,500,000 common shares (issued). The Company is also required to grant a two percent net smelter returns royalty on commercial production from the projects, one-half of which may be purchased at any time for a cash payment of \$1,000,000.

The Black Ridge Gold Project is a high-grade gold-silver-copper prospect that features several known mineral occurrences, including areas that have produced samples of *15.8 grams-per-ton ("g/t") gold ("Au"), 15.5 g/t Au, 12.1% copper ("Cu") and 143 g/t silver ("Ag"). The Bauline Epithermal Gold project also contains multiple gold occurrences up to 2.8 g/t Au.

During the quarter the company conducted a geochemical survey over the Black Ridge property a total of 253 soil samples were collected. At the time of writing the company was awaiting geochemical results and will report these results once they have been received, reviewed and verified.

There were minimal exploration activities conducted on the Bauline property during the year ended January 31, 2022.

Dorset Gold Project Province of Newfoundland

In March 2020 the Company entered into an agreement with Union Gold Inc. and Margaret Duffitt pursuant to which the Company acquired the Dorset Gold Project in consideration of the issuance of 11,000,000 common shares of the Company. The Company is also required to grant a two percent net smelter returns royalty on commercial production from the Project, one-half of which may be purchased at any time for a cash payment of \$1,000,000. In connection with the acquisition, the Company issued 550,000 common shares to an arms-length party which assisted with introducing the opportunity to the Company. The Company is at arm's length from the Vendors, and the acquisition of the Project does not constitute a fundamental acquisition under the policies of the TSX Venture Exchange. All securities to be issued in connection with the acquisition of the Project will be subject to a four-month-and-one day statutory hold period in accordance with applicable securities laws. The project consists of a series of mineral claims located in the Province of Newfoundland, south of the Pine Cove Gold Mine.

On April 22, 2020, the Company entered into a mineral property option agreement pursuant to which the Company granted the right to earn up to 100% interest in the Dorset Gold Project located in the Province of Newfoundland and Labrador, Canada. Under the terms of the agreement, the optionee in order to acquire interest in the property has to pay \$100,000 (received) on the closing date; \$50,000

NEXUS GOLD CORP.

(received) on or before 12 months from the closing date, \$100,000 24 months from the closing date, \$400,000 on or before 36 months from the closing date and \$600,000 on or before 48 months from the closing date. In addition, the optionee should incur exploration expenditures of \$1,500,000 over the five-year period from the closing date.

Nexus' earn-in partner, Leocor Gold (CSE: LECR), has been on the Dorset project site recently, located in the Bai Verte Mining Camp, central Newfoundland, Canada. Leocor has been conducting a reconnaissance program over the last month to update the condition of the known showings, clearing overgrowth around these areas, collecting grab and chip samples, trenching and mapping potential drill locations. Results of the prospecting are expected sometime in the next several weeks.

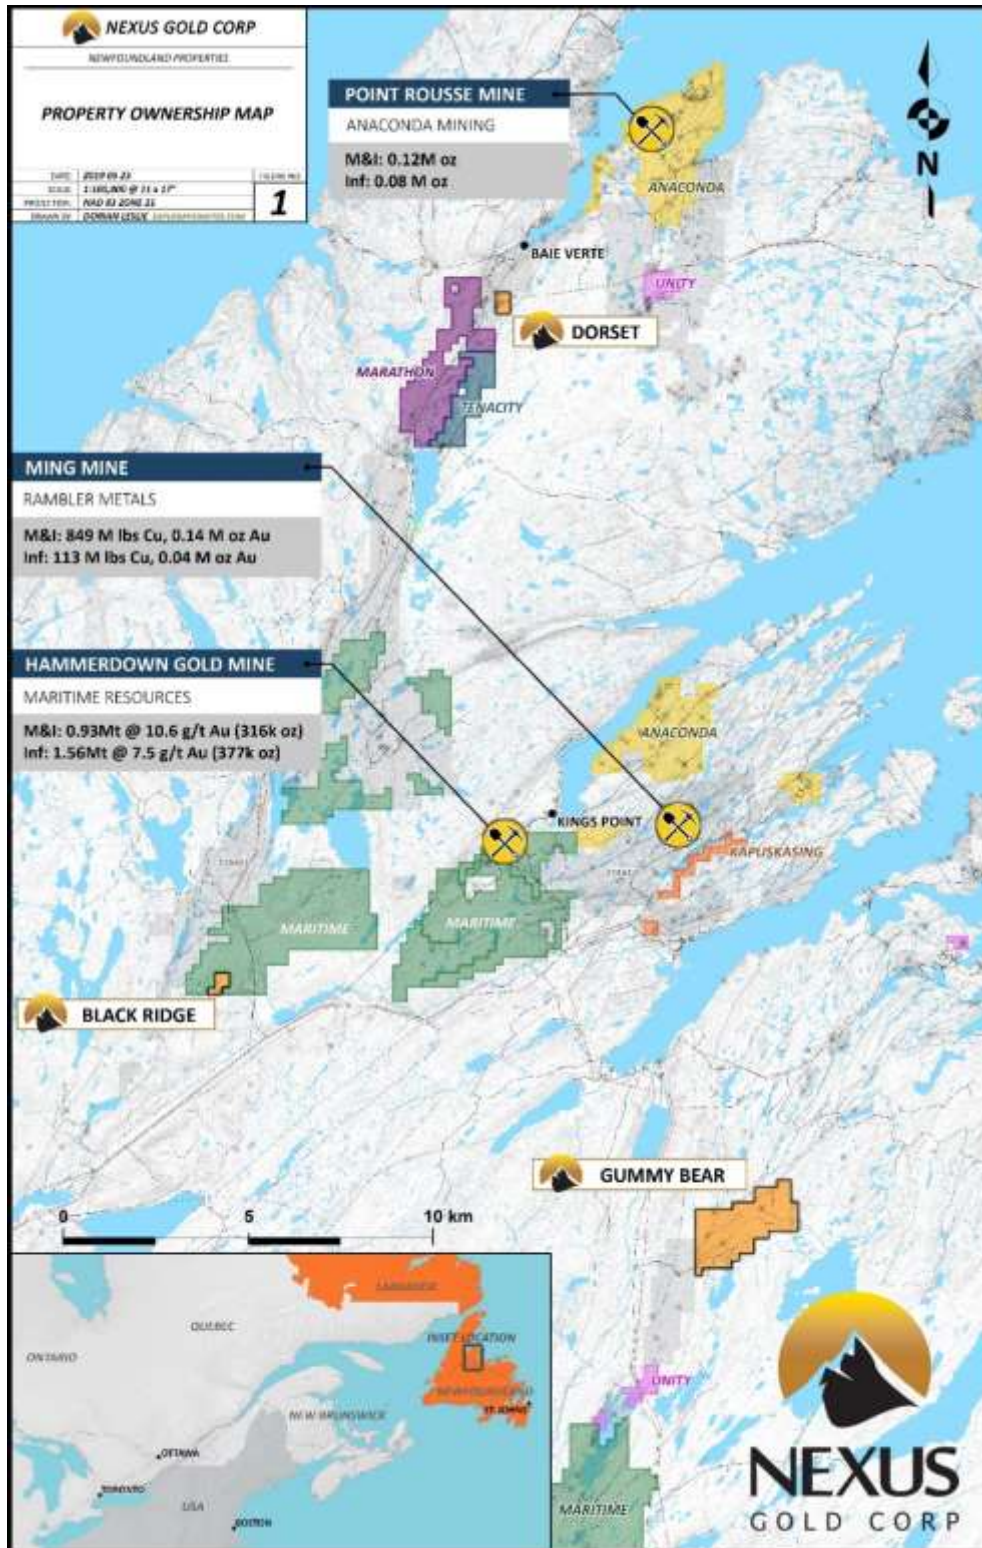

The Dorset Gold Project is a 275-hectare land package containing multiple gold occurrences and mineralized zones. The Main Zone includes three historic occurrences, with up to 409 grams-per-tonne ("g/t") gold ("Au") in grab samples, with channel sampling results of 177 g/t Au over .35m, 22 g/t Au over 1.5m, 17.2 g/t Au over 1.5m, and 14.7 g/t Au over 1.5m. Historic drilling includes DDH 87-1 which intersected 9.5 g/t Au over 1.3m (MacDougall, 1990). * The reported drill intercept is an intersected length and is not a true width.

Historic select sampling at the Braz Zone returned values of 314 g/t Au, 40 g/t Au, 31.4 g/t Au, 21.2 g/t Au, 19.2 g/t Au, and 14.8 g/t Au. Historic channel sampling across the vein, returned 9.5 g/t Au over 0.4m; 5.7 g/t Au over 0.5m and 1.2 g/t Au over 0.65m. Weighted averages of historic rock sampling encompassing vein and mineralized wall rock returned values of 5.8 g/t Au over 1.9m; 3.1 g/t Au over 2.0m and 2.5 g/t Au over 1.5m (MacDougall, 1990).

Other zones include the Albatross, where historic rock sampling of mineralized zones returned values up to 9.6 g/t Au and locally up to 30.3 g/t Au. Assay results from three 1987 diamond drill holes include 1.0 g/t over 7.3m, 1.81 g/t over 4.3m and 1.02 g/t over 2.2m; the Phoenix Zone where grabs of altered gabbro assayed up to 5.8 g/t Au, 5.5 g/t Au, and 3.3 g/t Au and diamond drill hole intersection of 1.07 g/t Au over 5.45m; and the Gunshot Zone, where veins contain visible gold and pyrite, returned grab samples collected from the veins have assayed up to 162 g/t Au and channel samples have assayed up to 18.0 g/t Au over 0.4m (MacDougall, 1989). * The reported drill intercept is an intersected length and is not a true width.

There was no exploration activities conducted on the Dorset property during the Quarter ending July 31, 2021.

Cyclone project

On September 22, 2021, Cyclone North Resources Inc (“Cyclone”), a subsidiary of the Company, entered into a mineral property acquisition agreement pursuant to which Cyclone has an option to acquire a 100% interest in and to a series of mineral claims located in the James Bay Territory of the Province of Quebec.

Pursuant to the Share Purchase Agreement dated September 23, 2021, the mineral property acquisition agreement was acquired by the Company.

The mineral claims are subject to a three percent (3.0%) net smelter returns royalty on commercial production from the claims in favor of the third party. One-half (1.5%) of the royalty may be purchased by Cyclone at any time prior to December 31, 2024 through a one-time cash payment of \$2,500,000 to a third party, and anytime thereafter through a one-time cash payment of \$5,000,000.

SELECTED ANNUAL FINANCIAL INFORMATION

The following is selected financial data derived from the audited financial statements of the Company at January 31, 2022, 2021 and 2020.

	Year Ended January 31, 2022	Year Ended January 31, 2021	Year Ended January 31, 2020
	\$	\$	\$
Total revenue	-	-	-
Total expenses	3,759,290	4,224,663	3,761,050
Loss for the year	(3,702,716)	(5,133,111)	(3,760,187)
Basic and diluted loss per share	(0.01)	(0.03)	(0.09)
Total Assets	7,172,004	7,029,441	5,186,394
Total Liabilities	625,636	501,176	905,030

RESULTS OF OPERATIONS

FOR THE YEAR ENDED JANUARY 31, 2022 AND 2021

During the year ended January 31, 2022, the Company had net loss of \$3,702,716 as compared to a net loss of \$5,133,111 for the year ended January 31, 2021.

Advertising expenses increased by \$142,947 from \$147,246 during the year ended January 31, 2021 to \$290,193 during the year ended January 31, 2022. Corporate Development expenses increased by \$83,625 from \$274,500 incurred during the year ended January 31, 2021 to \$358,125 incurred during the year ended January 31, 2022. Market and research analysis expense increased by \$327,489 and to \$719,766 during the year ended January 31, 2022 from \$392,277 incurred during the year ended January 31, 2021. These increases were offset by a decrease in Consulting fees by \$180,282 from \$792,370 during the year ended January 31, 2021 to \$612,088 during the year ended January 31, 2022. Marketing and Media expenses decreased by \$352,268 and \$253,697, respectively from \$840,464 and

NEXUS GOLD CORP.
MANAGEMENT DISCUSSION AND ANALYSIS
FOR THE YEAR ENDED JANUARY 31, 2022

\$510,364, respectively for the year ended January 31, 2021 to \$488,196 and \$256,667, respectively for the year ended January 31, 2022. Project sourcing expense decreased by \$212,445 from \$234,945 incurred during the year ended January 31, 2021 to \$22,500 incurred during the current year. In addition, the Share based compensation decreased by \$274,982 from \$461,735 incurred during the year ended January 31, 2021 to \$186,753 incurred during the current year.

During the period ended January 31, 2022 the Company continued expansion of its business. The corporate development services incurred during the year ended January 31, 2022 assisted the Company in locating and securing financing for the Company's exploration programs allowing the Company to concentrate its effort on exploration and evaluation of mineral properties.

In April 2021 the Company received \$50,000 from Dorset project partner. This and all future payments that will be received from project partners will be recorded as mineral property recovery.

FOR THE THREE MONTHS ENDED JANUARY 31, 2022 AND 2021

During the three months ended January 31, 2022, the Company had net loss of \$969,514 as compared to a net loss of \$2,198,946 for the three months ended January 31, 2021.

Office and administration expense increased by \$34,425 from \$17,005 incurred during the three months ended January 31, 2021 to \$51,430 incurred during the three months ended January 31, 2022. Share-based compensation increased by \$77,062 from \$33,925 for the three months ended January 31, 2021 to \$110,987 for the three months ended January 31, 2022. These increases were offset by a decrease in Advertising expenses by \$43,287 from \$44,244 during the three months ended January 31, 2021 to \$957 during the current quarter. Consulting fees and geological consulting decreased by \$70,471 and \$45,012, respectively from \$177,198 and \$45,950, respectively during the three months ended January 31, 2021 to \$106,727 and \$938, respectively during the three months ended January 31, 2022. Corporate development and advising decreased by \$53,375 from \$95,000 during the three months ended January 31, 2021 to \$41,625 during the current quarter. Marketing and Media expenses decreased by \$235,375 and \$170,728, respectively from \$385,666 and \$248,228, respectively during the three months ended January 31, 2021 to \$150,291 and \$77,500, respectively during the current quarter.

During the three months ended January 31, 2022 the Company continued expansion of its business. The advertisement services incurred during the three months ended January 31, 2022 assisted the Company in raising awareness of the Company's exploration programs among potential investors.

MANAGEMENT DISCUSSION AND ANALYSIS
FOR THE YEAR ENDED JANUARY 31, 2022**

QUARTERLY FINANCIAL INFORMATION

The table below sets out the quarterly results for the past eight quarters:

	January 31, 2022	October 31, 2021	July 31, 2021	April 30, 2021
Recovery	\$ -	\$ 50,000	\$ -	\$ 50,000
Operating expenses	1,007,413	730,187	1,122,625	899,065
Loss for the period	(969,514)	(730,272)	(1,103,865)	(899,065)
Loss per share	\$ (0.00)	\$ (0.00)	\$ (0.00)	\$ (0.00)

	January 31, 2021	October 31, 2020	July 31, 2020	April 30, 2020
Recovery	\$ -	\$ -	\$ -	\$ 70,000
Operating expenses	1,222,323	1,186,019	1,151,224	652,365
Loss for the period	(2,179,261)	(1,200,576)	(1,170,909)	(582,365)
Loss per share	\$ (0.01)	\$ (0.01)	\$ (0.01)	\$ (0.00)

The variation seen over the quarters is primarily dependent upon the success of the Company's ongoing business development, property evaluation and acquisition program and the timing and results of the Company's exploration activities on its current properties. The variation in net loss can also be significantly affected by the timing of stock option grants and the resulting share-based payment compensation recorded.

LIQUIDITY AND CAPITAL RESOURCES

The Company depends upon the junior capital markets to raise equity financing needed to fund its working capital requirements. The Company has no revenue generating operations from which it can internally generate funds. It relies on either the sale of its own shares as needed, or the sale or option of its exploration and evaluation assets. This situation is unlikely to change until such time as the Company can develop a bankable feasibility study on one of its projects.

When optioning properties the Company will sometimes issue its own stock to the vendors of the properties as partial or full consideration for the property in order to conserve its cash.

At January 31, 2022, the Company had a working capital of \$276,033 (2021 - \$2,616,949). This working capital will not be sufficient to enable us to cover anticipated expenses and continue all planned operations and property expenditures for the next 12 months, therefore the Company plans to raise additional equity financing in order to continue planned activities.

OFF – BALANCE SHEET ARRANGEMENTS

The Company has not entered into any off-balance sheet arrangements or commitments.

During the year ended January 31, 2022 Mr. Robb was paid \$175,829 (2021 - \$126,209) in geological exploration expenses capitalized to mineral properties and \$5,438 (2021 - \$nil) for geological consulting services.

EVALUATION OF DISCLOSURE CONTROLS AND PROCEDURES

Disclosure controls and procedures are controls and other procedures that are designed to provide reasonable assurance that all relevant information required to be disclosed in the Company's reports filed or submitted as part of the Company's continuous disclosure requirements is gathered and reported to senior management, including the Company's Chief Executive Officer and Chief Financial Officer, on a timely basis so that appropriate decisions can be made regarding public disclosure and such information can be recorded, processed, summarized and reported within the time periods specified by applicable regulatory authorities.

Management of the Company, with the participation of the Chief Executive Officer and the Chief Financial Officer, has evaluated the effectiveness of the Company's disclosure controls and procedures as at January 31, 2022 as required by Canadian securities laws. Based on that evaluation, the Chief Executive Officer and the Chief Financial Officer, have concluded that, as of January 31, 2022 the disclosure controls and procedures were effective to provide reasonable assurance that information required to be disclosed in the Company's annual filings and interim filings (as such terms are defined under Multilateral Instrument 52-109 Certification of Disclosure in Issuer's Annual and Interim Filings) and other reports filed or submitted under Canadian securities laws is recorded, processed, summarized and reported within the time periods specified by those laws and that material information is accumulated and communicated to management of the Company, including the Chief Executive Officer and the Chief Financial Officer, as appropriate to allow for accurate disclosure to be made on a timely basis.

FINANCIAL INSTRUMENTS

Fair values

Fair value estimates of financial instruments are made at a specific point in time, based on relevant information about financial markets and specific financial instruments. As these estimates are subjective in nature, involving uncertainties and matters of significant judgment, they cannot be determined with precision. Changes in assumptions can significantly affect estimated fair values.

The fair value hierarchy has the following levels:

Level 1 - quoted prices (unadjusted) in active markets for identical assets and liabilities;

Level 2 - inputs other than quoted prices included in Level 1 that are observable for the asset or liability, either directly (i.e., as prices) or indirectly (i.e., derived from prices); and

Level 3 - inputs for the asset or liability that are not based on observable market data (unobservable inputs).

The fair value of cash is determined using level 1 of the fair value hierarchy. The carrying values of the accounts payable, and due to related parties approximate their fair values due to the expected maturity of these financial instruments.

**NEXUS GOLD CORP.
MANAGEMENT DISCUSSION AND ANALYSIS
FOR THE YEAR ENDED JANUARY 31, 2022**

Financial instrument risk exposure and risk management

The Board of Directors has overall responsibility for the establishment and oversight of the Company's risk management framework. The Company considers the fluctuations of financial markets and seeks to minimize potential adverse effects on financial performance.

The Company is exposed in varying degrees to a variety of financial instrument related risks. The Board approves and monitors the risk management process.

(a) Credit risk

Credit risk is the risk of a financial loss to the Company if a counterparty to a financial instrument fails to meet its contractual obligation. The Company's exposure to credit risk includes cash, commodity tax recoverable, and subscription receivable. The Company manages credit risk, in respect of cash, by placing its cash with a major Canadian financial institution in accordance with the Company's investment policy.

Concentration of credit risk exists with respect to the Company's cash as all amounts are held at a single major Canadian financial institution. The Company's concentration of credit risk and maximum exposure thereto is considered minimal.

The maximum exposure to credit risk is equal to the fair value or carrying value of the financial assets.

(b) Liquidity risk

Liquidity risk is the risk that the Company will encounter difficulty in obtaining funds to meet commitments. The Company's ability to continue as a going concern is dependent on management's ability to raise required funding through future equity issuances. The Company manages its liquidity risk by forecasting cash flows from operations and anticipating any investing and financing activities.

Management and the Board of Directors are actively involved in the review, planning and approval of significant expenditures and commitments. The Company is exposed to liquidity risk.

(c) Market risk

Market risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market prices. Market risk comprises three types of risk: interest rate risk, foreign currency risk and commodity price risk.

i. Interest rate risk

Some of the Company's accounts payable are subject to interest on unpaid balances.

**NEXUS GOLD CORP.
MANAGEMENT DISCUSSION AND ANALYSIS
FOR THE YEAR ENDED JANUARY 31, 2022**

ii. Foreign currency risk

The Company's functional currency is the Canadian dollar; however, exploration costs and property option payments are transacted in US dollars and West African CFA franc. A one percent change in foreign exchange rates will result in an immaterial change to profit or loss.

iii. Commodity price risk

Commodity price risk is the risk that the fair or future cash flows of a financial instrument will fluctuate because of changes in market prices, other than those arising from interest rate risk or foreign currency risk. The Company actively monitors commodity price changes and stock market prices to determine the appropriate course of action to be taken by the Company.

OUTSTANDING SHARE DATA

As at January 31, 2022 and the date of this MD&A, the Company has 317,733,233 common shares issued and outstanding.

As at January 31, 2022, the Company had 12,461,905 and as at the date of this MD&A, the Company has 11,311,905 share purchase options outstanding.

At January 31, 2022, the Company had 170,982,088 and as at the date of this MD&A, the Company has 154,319,176 warrants outstanding.
